

## Quest migrates ChartMaxx® to Quantum™ Enterprise Content Solutions

You already know Quest Diagnostics is more than a lab company; it also designs technology solutions to help ease your business challenges. Now, to better align its technology portfolio under one brand, Quest is migrating the ChartMaxx® brand into the Quantum™ Solutions portfolio as Quantum Enterprise Content Solutions.

Quantum Enterprise Content Solutions brings our deep expertise in document imaging management into the Quantum Solutions portfolio which also includes offerings such as Lab Utilization, Data Diagnostics, eLabs, ePrescribing, Interactive Insights, Electronic Health Record, Practice management, and Revenue Cycle Management.

The Enterprise Content Solutions name change coincides with the 2018 product release, which gives users:

- A new technology platform which enables quicker solution upgrades and reduced need for support
- Integrated Deep Search to derive value from stored content
- Intelligent Data Capture to automate content intake, reduce quality review processes, and drive workflow automation
- Hosted solution options to drive IT cost-containment initiatives
- Support for many third-party components to current versions

“We continue to create functionality that enables healthcare organizations to achieve enterprise-wide content management, transforming data and documents to support and improve patient care, drive operational efficiencies, and lower costs,” said Tom Romeo, General Manager Healthcare IT, Quest Diagnostics.

Rest assured that this name change will have no impact on your experience using our products. All of the features that you currently enjoy will remain exactly as they are. The migration from ChartMaxx to Quantum Enterprise Content Solutions will continue throughout 2018 in all of our publications, product user interface, and branding, and we look forward to providing you with even more functionality across our diverse product line.
